

If you are using Windows Internet Explorer you need to clear your temporary browser memory and files (clear your cache). Internet explorer remembers where you have been and stores the screens of certain websites. This may causes new cm/ecf features not to load properly

Please locate the "tools" button on your browser screen.

1. Left-Click on Tools
2. Select Internet Options
3. Left-Click on DELETE

4. Then left-click on Delete Files

5. Answer yes to delete all Temporary Internet files.

This may take a few minutes.

Different versions of Internet explorer may vary from this procedure. If you are unsure please contact our technical support department at 912-650-4010.

Now you should be ready to login!
